The Crystal Battery Light

One of nature's purest forms of electricity, the Crystal Water Battery. Your kit consists of Alum, Copper and Magnesium and when properly placed and coupled with the proper electronic circuit will produce a bright LED with an endless supply of electricity.

This kit has been designed as an educational aid in combining elements to produce an electrical charge, a curiosity of sorts. By just adding water the chemical reaction begins, and the electrified crystals will begin to grow as they produce electricity, which will power the LED light.

Your Crystal Battery Light will perform for many years using just water as its only fuel source. If your crystal dries out it will not damage the lamp and can sit for many years in a dried condition until needed. By adding just a few ounces of water around the crystal will return it to its previous working condition and full brightness.

The Crystal Light contains the following:

1. Base assembly.
2. Plastic base ring.
3. Magnesium round.
4. Copper Bowl.
5. Alum Powder.

Assembly Instructions

Assembly:

Step 1) Add two to three ml of distilled water using the provided syringe, wetting all the way around the magnesium round.

Step 2) Now you are ready to turn on the LED light on by flipping the toggle switch to the on position.

Step 3) It may take several minutes for the water to absorb into the crystal structure and then your LED will begin to function.

SPECIAL NOTE:

Only add water as need, when light begins to dim. Humidity plays a factor in when you will need to add water.

Do not overfill, very little water is needed to bring the Crystal Light to full brightness.

As crystals grow you may need to remove them by breaking them off, or pushing them down back into the bowl.

LIMITED 1 YEAR WARRANTY

Energenx warrants this product from any defects and will replace it free of charge during its warranty period. All product returns must be pre-paid (shipping only) and Energenx will promptly replace your Water Battery once received. If warranty replacement does not apply, we will prorate the use of your Water Battery and the difference will be charged for replacement. Keep your original packing to return your Water Battery in.

WARNING

Damage may occur from continuous over filling, if this occurs allow your Water Battery to completely dry out.

PLACEMENT

Your Water Battery can be placed almost anywhere you desire, however it is suggested that it not be placed in the rain or exposed to harsh conditions.
